Artemis Space

Artemis Space Technologies is an end-to-end space infrastructure company offering a complete solution suite from concept to launch and operations. The company core product line is the Xplora satellite platform family, spanning CubeSat sizes from 3U to 16U and scaling up to the Iris 27U, X1 Athena (100 kg), X2 Gaia (300 kg), and X3 Aegaion (500 kg) microsatellite and smallsat platforms. All Xplora platforms are standardized yet customizable, incorporating the latest-generation flight computers, power systems, propulsion options, and high-speed data links. The platforms support hosted payload configurations, allowing customers to fly their instruments on existing Artemis missions, or to procure dedicated satellite builds. Beyond hardware, Artemis Space operates a Space as a Service model, providing launch integration, ground station network access, satellite operations, and a marketplace for subsystems and services. The company acts as a mission enabler, handling every aspect of a customer space program from initial requirements through in-orbit operations. Artemis Space also offers manufacturing services for CubeSat structures and flight hardware, enabling customers to access professional space-grade fabrication capabilities.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

Dedicated hosted payloads

Artemis Space provides dedicated hosted payload services to enable disruptive access to space for customers.

IoT ecosystem navigation and connectivity solutions

The company helps customers navigate the complex IoT ecosystem and provides solutions for their connectivity needs through its global nanosatellite constellation.

Telecommunications infrastructure for in-space assets

Artemis Space is building a telecommunications infrastructure using a nanosatellite constellation to support in-space assets and the new space economy.

Product catalogue

ARTEMIS SPACE

Iris 27U Satellite Platform

Cost-effective 27U satellite platform for constellations and advanced missions, with 30 kg max payload capacity.

price on request

ARTEMIS SPACE

X1 Athena Microsatellite

Versatile microsatellite platform for complex payloads, scaleable to 100 kg max payload capacity.

price on request

ARTEMIS SPACE

X2 Gaia Microsatellite

Compact scaleable microsatellite platform for advanced missions, up to 300 kg total with 200 kg payload capacity.

price on request

ARTEMIS SPACE

X3 Aegaion Satellite Platform

Artemis Space's largest satellite platform, flexible and scaleable to 500 kg with 300 kg max payload capacity.

price on request

ARTEMIS SPACE

Xplora 12U CubeSat Platform

The Xplora 12U CubeSat is a compact, affordable, and high-performance standardized platform designed to carry advanced payloads for single or multi-mission concepts.

price on request

ARTEMIS SPACE

Xplora 16U CubeSat Platform

The Xplora 16U CubeSat is a compact, affordable, high-performance standardized platform designed to operate various payloads, offering customization for mission-specific needs.

price on request

ARTEMIS SPACE

Xplora 3U CubeSat Platform

The Xplora 3U CubeSat is a compact, affordable, and high-performance platform designed to operate various payloads, offering customization for mission-specific needs.

price on request

ARTEMIS SPACE

Xplora 6U CubeSat

The Xplora 6U CubeSat is a compact, affordable, and high-performance platform designed to host various payloads for space missions.

price on request

ARTEMIS SPACE

Xplora 8U CubeSat Platform

The Xplora 8U CubeSat is a compact, affordable, and high-performance standardized platform designed to operate various payloads, offering customization for mission-specific needs.

price on request
