ClearSpace

ClearSpace designs and manufactures spacecraft for in-orbit servicing, focusing on inspection, life extension, and debris removal. Their product lines include maneuverable spacecraft for close-up inspection, and systems for safe disposal through controlled re-entry or targeted removal. Customers include institutional and commercial entities, such as the European Space Agency (ESA) and the UK Space Agency, as well as operators like Intelsat. The company was founded in 2018 in Switzerland and is headquartered in Luxembourg, with operations also in the United Kingdom and Germany. ClearSpace has achieved ISO 9001:2015 certification. Notable programs include ClearSpace-1, Europe's first active debris removal mission developed with ESA, Phoenix, a life-extension mission, and PRELUDE, a mission to validate advanced Guidance, Navigation, and Control (GNC), force and motion control, and six-degrees-of-freedom rendezvous and proximity operations.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

In-Orbit Inspection of Client Assets

ClearSpace offers high-fidelity inspection services using manoeuvrable spacecraft to provide precise characterisation, ownership attribution, and operational protection of in-orbit assets.

In-Orbit Servicing (IOS)

ClearSpace provides a range of in-orbit servicing capabilities, including inspection, life extension, and debris removal, to enable a circular space economy.

Licensing and Regulatory Support for RPO Missions

ClearSpace participates in regulatory sandbox projects to help inform and enable regulation for novel Rendezvous and Proximity Operations (RPO) missions.

Life Extension

ClearSpace is developing technologies and missions for in-orbit life extension of satellites.

Safe Disposal / Targeted Debris Removal

ClearSpace provides end-to-end debris mitigation services, including controlled re-entry and targeted removal, to protect assets and preserve orbital access.
