CONTEC

CONTEC provides an "all-in-one" solution for receiving, processing, and analyzing satellite data. The company supports various space missions through its Eum ground station network, which is installed globally. CONTEC offers OGS and RF product lines. The company expects its order backlog to exceed KRW 50 billion by year-end. CONTEC and AP Satellite CEO Lee Seong-hee have discussed vertical integration synergy for global and QKD expansion.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

CONTEC ONE (Satellite Communication Scheduling)

CONTEC ONE is a web-based service for scheduling and reserving satellite communications globally through CONTEC's ground station network.

Ground Station Construction Site Environment Analysis

CONTEC provides optimal solutions for ground station site selection through environmental analysis, including climate, line-of-sight, radio interference, geological surveys, and infrastructure assessm

Ground Station Hosting

CONTEC offers hosting services for customer antennas at its ground stations, including technical and administrative support.

Ground Station Integrated Operation Software

CONTEC provides software for monitoring, controlling, and integrating ground RF systems, enabling efficient management and operation with minimal staff.

Ground Station System Design/Construction

CONTEC provides turn-key solutions for ground station systems, covering site selection, design, construction, operation, control, maintenance, and integrated operation software development.

Product catalogue

CONTEC

CONTEC Ground Station Automation Software

South Korean company providing ground station automation software and satellite operations solutions for small satellite constellations.

Product

Ground station automation software

Applications

Satellite constellation operations

price on request

CONTEC

Embedded Computing and OBC for Smallsats

CONTEC's compact embedded computing boards and on-board computers (OBCs) for small satellites — applying CONTEC's industrial computing expertise to space-grade satellite avionics.

Products

Embedded SBCs, OBC modules, industrial IoT, data acquisition for space

Interfaces

CAN bus, UART, SPI, I2C (standard satellite protocols)

Space program

SSTJ nano-satellite bus (partner program)

Customers

JAXA, NICT, Japanese research institutions

HQ

Osaka, Japan (TSE Prime Market listed)

Background

Industrial computing company applying rugged hardware expertise to space

price on request
