Expleo

Expleo provides engineering, digital, and quality services for satellite systems, payload development, and ground operations across the full lifecycle. The company supports space agencies, satellite manufacturers, and commercial space organizations. Expleo offers services including satellite payload and application development, launching activities, and enabling complex system interoperability. They also provide testing and validation services to ensure space systems meet performance, reliability, and compliance requirements, and support NewSpace programs. Expleo integrates AI into space engineering and manufacturing processes. The company has a clean room facility. Expleo also serves other industries such as automotive, aerospace, railway, defence, energy, banking, and insurance. They have over 50 years of aerospace expertise.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

Customer support & maintenance Expleo helps manufacturers and service providers achieve high customer satisfaction and low Total Cost of Ownership through predictive data analytics and maintenance strategies.
