Hiber

Hiber (legal entity: HWS Solutions B.V.) is a remote IoT monitoring solutions provider headquartered in Amsterdam, Netherlands, founded in 2016. The company builds end-to-end IoT systems — rugged sensor hardware, intuitive software dashboards, built-in satellite connectivity, and managed services — for upstream oil and gas operators monitoring well pads in remote, off-grid environments. Their flagship product, HiberHilo®, helps energy teams digitize upstream operations, reduce emissions, and cut unnecessary maintenance trips to remote sites. The platform integrates satellite, LAN, and cellular connectivity; monitors pressure, temperature, flow, vibration, and valve status; and serves use cases including pipeline monitoring, pigging optimization, and producing/injection/naturally flowing/artificially lifted well monitoring through decommissioning. HiberHilo® is certified SOC 2 (2023, renewed 2025) and holds international regulatory approvals. Hiber operates across 5 continents and holds a global framework agreement with Shell signed in 2020. The company originally launched as a satellite connectivity provider before pivoting to a full end-to-end IoT platform. Installation is DIY, completed in hours without special tools, and the hardware comes with a lifetime warranty.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

Deployment Planning and Validation Hiber assists with deployment planning, including RF data analysis, gateway placement, and link validation.	Expert Support Hiber offers expert support throughout the customer journey, from setup to scaling.
Managed Services Hiber offers managed services including software updates, remote deployment training, lifetime warranty, and guaranteed uptime for their systems.	Real-time System Monitoring Hiber provides real-time monitoring of their systems to ensure reliable connectivity and performance.
Remote Deployment Training Hiber provides remote training to help customers deploy their systems effectively.
