ImageSat International (ISI)

ImageSat International (ISI) designs, develops, and delivers turnkey space programs. The company unifies satellite imagery, space and ground infrastructure, and AI-driven analytics to provide end-to-end space intelligence capabilities. ISI's product lines include high-performance electro-optical (EO) satellites, proprietary multi-mission VVHR satellite platforms, a cloud-based intelligence platform with AI-driven software, advanced broad-spectrum EO sensing technology, on-prem data centers for computing and storage, and edge computing with on-board embedded AI in operational satellites. They also offer the ClearSky Command & Control system for multi-satellite mission optimization. ISI provides end-to-end sovereign space and intelligence capabilities, including advanced Earth observation satellites, sovereign space and ground infrastructure design and deployment, the GEOIMPACT Intelligence Platform for geospatial analytics, and national-scale data and computing infrastructure. Their customers are enabled to establish and operate independent sovereign intelligence capabilities. It also does not list specific flight heritage units delivered or missions flown, nor does it mention qualifications or standards held.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

End-to-End Sovereign Space & Intelligence Capabilities ISI provides comprehensive space and intelligence solutions, integrating satellite imagery, infrastructure, and AI analytics for actionable geospatial intelligence.	GEOIMPACT Intelligence Platform Integration ISI integrates satellite imagery, AI-driven analysis, layered data, and operational dashboards into a unified geospatial analytics environment.
National-Scale Data & Computing Infrastructure ISI builds high-performance processing environments and secure data architectures for large-scale imagery analysis and mission-critical intelligence.	Sovereign Space & Ground Infrastructure Deployment ISI designs and deploys national satellite assets, ground stations, and secure mission control systems for full sovereign ownership.
