mu Space Corp

mu Space Corp is a space technology and satellite company based in Thailand. The company designs and builds high-powered satellites, including the mu-b200 model. They operate smart factories (Factory 1 and Factory 2, with a third planned) for manufacturing and testing satellite prototypes. mu Space Corp secured a Type III Satellite License in October 2017. Their customers and partners include CAT for a Satellite Gateway at Nonthaburi, SES and HUGHES for satellite services, DEPA for IoT Innovation Development, SpaceX for collaboration on the Tham Luang cave rescue mission, Relativity for a NASA project (Autonomous Precision Landing), Qualcomm for 5G CV2X and smart city projects, and TOT for Space IDC and VSAT Teleport Gateway projects. They have also engaged with Airbus for an RTAF satellite project proposal and submitted a proposal for an RTAF Micro satellite project. The company has been shortlisted in 2 NASA projects and submitted 5 proposals for NASA projects. They have filed 3 patents for smart apparel and IoT sensors. Their payloads have been sent to the Suborbital in collaboration with TOT. The company also installs 5G network solutions and provides 5G field measurement equipment.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

5G & Fiber Optic Installation and Maintenance Services

mu Space offers comprehensive installation and maintenance services for 5G and Fiber Optic infrastructure, including base stations and field measurement equipment.

5G Fiber Installations Services

mu Space provides installation services for 5G Fiber infrastructure, supporting digital connectivity solutions.

Satellite Internet Systems for Low Earth Orbit

mu Space offers satellite internet systems for low Earth orbit, providing high-speed, low-latency connectivity to underserved areas.

Space Payload Services

mu Space offers space payload services for testing customer payloads in various space environments, supporting research and development.
