Orbcomm

ORBCOMM designs and manufactures IoT devices and provides hybrid satellite-cellular connectivity and advanced direct-to-device capabilities. The company offers intelligent cargo visibility solutions, including VIACHAIN, to reduce spoilage, combat cargo theft, and simplify compliance. Its product lines include satellite communications and products, encompassing OG2, IDP, and OGx satellite networks, and a comprehensive IoT device portfolio.

ORBCOMM serves customers in various vertical markets, including transportation, heavy equipment, satellite services, containers, ports, and maritime, providing asset monitoring for dry and refrigerated shipping containers. The company has 800 employees spanning 25 countries. It expanded its authorized country list for satellite network services by more than 40 countries. The company acquired SkyWave Mobile Communications in 2015.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

Product catalogue

**ORBCOMM****SC 1000**

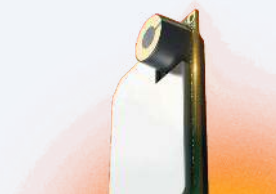

A small, solar-powered, solar-powered satellite IoT terminal for cost-effective asset tracking using ORBCOMM's next-generation OGx satellite service.

[price on request](#)[datasheet](#)**ORBCOMM****ST 2100**

The SKYWAVE ST 2100 is a compact satellite IoT terminal that adds primary or backup satellite connectivity to IoT solutions for remote asset tracking and monitoring.

[price on request](#)[datasheet](#)**ORBCOMM****ST 4000**

Embeddable hybrid IoT connectivity module combining LTE-M cellular and satellite connectivity to eliminate coverage gaps beyond cellular networks.

[price on request](#)[datasheet](#)**ORBCOMM****ST 6000**

The ST 6000 is a compact satellite IoT terminal designed for OEMs and hardware integrators, offering integrated antennas and easy programmability for terrestrial and maritime track

[price on request](#)[datasheet](#)

ORBCOMM

ST 6100

The ST 6100 is a comprehensive satellite IoT terminal designed for reliable and cost-effective satellite IoT connectivity in remote locations.

[price on request](#) [datasheet](#)

ORBCOMM

ST 9100

A dual-mode IoT connectivity terminal combining 4G LTE/3G/2G cellular with automatic satellite fallback for continuous asset tracking and monitoring coverage.

Cellular connectivity	4G LTE/3G/2G
Satellite connectivity	Automatic fallback for total network coverage
Bluetooth	Supported
SIM support	Multiple SIMs
I/Os	4 I/Os, including analog/digital, 2 RS232, RS-485/J1708, 1-Wire, 2 CANbus
Routing	Intelligent least-cost routing between cellular and satellite connectivity

[price on request](#) [datasheet](#)
