RSat Space

RSat Space is a Canadian aerospace company specializing in the rapid design, manufacturing, integration, and testing of small satellites for defense, national security, civil government, and commercial customers. The company positions itself around speed — delivering satellites from design to orbit in months rather than years — to meet the needs of urgent and complex space missions. RSat's capabilities span satellite manufacturing, assembly, integration and test (AIT), propulsion systems, and orbital transfer vehicles (OTVs) that enable flexible on-orbit maneuvering and multi-payload deployment. The company serves defense and national security agencies requiring responsive space capabilities, as well as infrastructure, environmental, and maritime users needing dedicated Earth observation or communications payloads. As part of Canada's growing space industrial base, RSat Space contributes engineering and manufacturing capacity to the North American small satellite market, targeting government and commercial operators who need fast turnaround on custom satellite platforms and mission-specific hardware.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

Services

Ground Segment & Mission Operations RSat Space delivers secure ground segment architectures and provides ongoing mission operations support for satellite assets.	Launch Planning & Orbit Access RSat Space assists with launch coordination and provides solutions for accessing desired orbits, including orbital transfer capabilities.
Manufacturing, Integration & Testing (AIT) RSat Space performs in-house manufacturing, integration, and rigorous testing of spacecraft, payloads, and supporting infrastructure.	Mission Design & System Engineering RSat Space provides expert mission design and system engineering to define and plan satellite missions according to customer objectives.
Turnkey Mission Delivery (End-to-End) RSat Space manages the entire lifecycle of a satellite mission, from design to operations, providing a complete, ready-to-use system.
