Sedaro

Sedaro is a US-based digital engineering and simulation software company that provides a cloud-based, AI-accelerated modeling and simulation platform connecting tools, models, data, and teams into automated, scalable workflows across the full mission lifecycle - from early design trades through real-time operations. The Sedaro platform enables multi-domain simulation across hundreds or thousands of interconnected assets spanning space, air, land, sea, and cyber domains, with configurable fidelity and hyper-scale orchestration across distributed compute. Its solutions support agile mission engineering (acquisition decision support, multi-domain dependency analysis), digital test and training (high-fidelity simulation for wargaming, test campaigns, and TTP validation), and trusted autonomy (physics-accurate digital twins for mission rehearsal, system training, and edge data collection), including the open-source Sedaro Autonomy Framework for Edge (SAFE). Sedaro is actively deployed inside Department of War and Intelligence Community programs supporting space, missile defense, joint all-domain operations, and force design, and is staffed entirely by US citizens eligible for security clearances with no foreign ownership. The company's cloud-native, containerized platform is built for secure deployment across sensitive environments, offering DevSecOps automation, ATO/CTF-ready compliance artifacts (SSP, SBOM, STIG compliance, network architecture diagrams), and open, MOSA-compliant APIs.

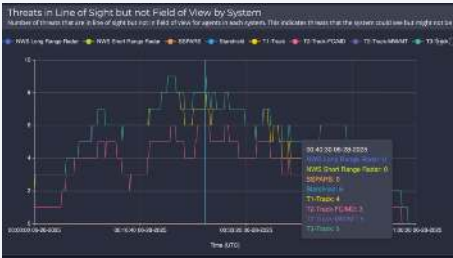

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

Agile Mission Engineering Sedaro helps evaluate complex system architectures to reduce integration risk and accelerate acquisition decisions for customers.	Digital Engineering and Simulation Software Sedaro provides cloud-based digital engineering and simulation software that enables organizations to model, analyze, and rapidly develop complex mission-critical systems.
Digital Test and Training Sedaro offers digital test and training services to simulate environments and assess mission effectiveness under dynamic and adversarial conditions.	Tailored Platform Walkthrough and Consultation Sedaro offers tailored walkthroughs of their platform and consultations with their team to explore capabilities and solutions for specific organizational needs.
Trusted Autonomy Sedaro helps create high-fidelity digital twins to support mission rehearsal, system training, edge data collection, and automated decision workflows.	

Product catalogue

SEDARO

Sedar Platform

Cloud-based, AI-accelerated modeling and simulation platform connecting tools, models, data, and teams into automated, scalable workflows across the mission lifecycle.

Deployment	Containerized, cloud or on-premises, accredited environments
Integration	Open APIs, MOSA-compliant standards
Compliance artifacts	SSP, POA&M inputs, ASD STIG, SBOM, PPSM, network/data flow diagrams
