SpaceLink

SpaceLink Corporation is building a high-capacity relay satellite constellation in Medium Earth Orbit (MEO) that ensures at least one relay satellite is always visible to any Low Earth Orbit spacecraft or habitat. Their Always in Sight service eliminates data downlink delays — reducing wait times from 45–90 minutes to near real-time — for satellite operators in commercial Earth observation, defense and intelligence, civil space, and human spaceflight sectors. SpaceLink holds exclusive licensing for more than 21 GHz of radio frequency spectrum for relay services, making them the commercial successor to NASA's TDRSS data relay system. Their architecture is designed to scale to 10 Terabits per second of orbiting optical capacity, with intersatellite links routing data directly to customer-specified ground terminals anywhere on Earth. Headquartered in McLean, Virginia with a Silicon Valley office in Mountain View, California, SpaceLink is a wholly owned subsidiary of Electro Optic Systems Holdings Limited (EOS), a public company traded on the Australian stock exchange. SpaceLink has received NASA contracts and DARPA Space-BACN selection for optical ground relay studies.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

SERVICES

Services

Communications infrastructure for space economy

SpaceLink is building a core communications infrastructure to support the rapidly expanding space economy, enabling secure and continuous monitoring and control.

Development of protocols for commercial-DoD space interaction

SpaceLink assists DARPA in studying and developing protocols for how commercial communications constellations will interact with DoD systems in a Space-to-Space interconnected future.

High-capacity data relay service

SpaceLink provides a high-capacity data relay service using optical intersatellite links to speed massive amounts of data from LEO spacecraft to users on Earth.

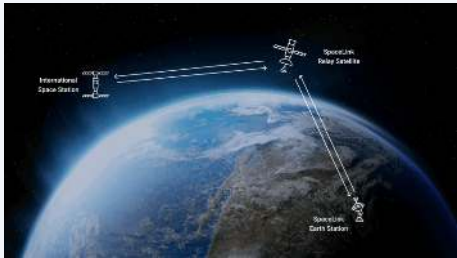

Network modeling, resource optimization, and scheduling management software

SpaceLink has developed proprietary software for network modeling, resource optimization, and scheduling management to enhance its relay satellite constellation's capacity and throughput.

Regulatory support for spectrum utilization and licensing

SpaceLink assists customers with regulatory hurdles, including spectrum utilization and satellite licensing, to ensure smooth operations.

Product catalogue

SPACELINK
Continuous communications for human spaceflight

SpaceLink provides continuous, high-capacity broadband communication services for human spaceflight, connecting spacecraft, habitats, and depots in LEO to Earth.

price on request

SPACELINK
Satellite Data Access (SpaceLink)

SpaceLink offers a data relay service utilizing Medium Earth Orbit (MEO) satellites to provide real-time, high-speed data transfer for Low Earth Orbit (LEO) satellites, eliminating

price on request

SPACELINK
Secure connectivity for defense & intelligence

EOS SpaceLink provides secure, low-latency data connectivity services for defense and intelligence applications using a dedicated network of MEO spacecraft and ground stations.

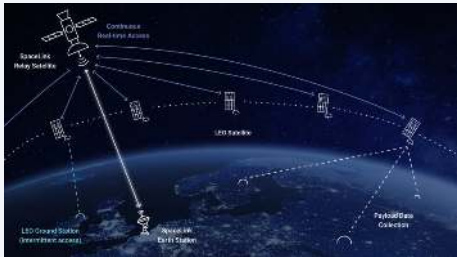

price on request

SPACELINK
SpaceLink

SpaceLink is a high-bandwidth, continuous communications relay service for spacecraft in various orbits, addressing the limitations of direct-to-Earth station communication.

price on request

SPACELINK
SpaceLink Civil Space Data Relay Service

SpaceLink offers a commercial data relay service for civil space missions, providing high-capacity, fast data transfer capabilities.

price on request
