ZeroG Lab

Founded in 2016 and headquartered in Beijing, ZeroG Lab focuses on micro- and nanosatellites — scenario-defined spacecraft built for a specific mission need.

Alongside satellite manufacturing the company supplies core components for small satellites, deployment and separation mechanisms, and provides launch coordination and technical advisory services. Its Earth observation offering covers security, infrastructure monitoring, environmental applications and sovereign data programmes.

This profile is generated from the live NewSpace Market catalogue. Specifications are as published by the manufacturer; every product links to a page where a request for quotation reaches the company directly.

PRODUCTS

Product catalogue

ZEROG LAB

CubeSat Platforms

Scenario-defined CubeSat platforms built by ZeroG Lab for rapid, mission-specific deployment.

price on request

ZEROG LAB

Onboard Flight Computers

Fault-tolerant onboard computers with AI acceleration for navigation and payload processing.

price on request

ZEROG LAB

Optical Cameras for Earth Observation

Ultra-sensitive imaging payloads with adaptive optics for real-time Earth monitoring.

price on request

ZEROG LAB

Remote Sensing Satellites

Earth observation satellites delivered as complete missions, from spacecraft to data products.

price on request

ZEROG LAB

Satellite Bus Platforms

Modular satellite bus architectures for rapid deployment and on-orbit reconfiguration.

price on request

ZEROG LAB

Satellite Power Systems

High-efficiency power modules with solar and battery technology and adaptive regulation.

price on request
