

SmartLITE NMS

HSK_NMS_002

The **SmartLITE Network Management System (NMS)** is an On-Premises, comprehensive suite of tools for monitoring, administration, and analysis of the HISKY SmartLITE System. Its user-friendly interface and robust functionality ensure the efficient operation of your operational satellite communication system.

The On-Premises NMS enables setting up and maintaining the following components as well as extensive reporting:

- ▶ Real-Time Monitoring & Control
- ▶ Continuous visibility into network performance, terminals, HUB
- ▶ Terminal & Device Management
- ▶ Centralized control of terminal and HUBs, including configuration, remote diagnostics
- ▶ Service Provisioning & Automation
- ▶ Automated onboarding and configuration of services, including bandwidth allocation, QoS policies, and rapid deployment of new terminals
- ▶ Performance Analytics
- ▶ Collection and analysis of historical data (offline analysis) of systems behavior

SmartLITE System's Core Elements
